

Sekgalake Johannes Motsemme

BSc Computer Science & Electronics Graduate

Midrand, Gauteng, South Africa | +27 61 662 2899 | johnnymotsemme6@gmail.com | [LinkedIn Profile](#)

Objective

A highly motivated and analytical Computer Science graduate with a solid foundation in software engineering, object-oriented programming, and cloud technologies. Highly proficient in Java development, relational databases, and the Software Development Life Cycle (SDLC). Proven academic and practical experience designing and building secure, scalable applications utilizing JavaFX, JDBC, and SQL. Recently upskilled in financial tech environments, cybersecurity analysis (CySA+), DevOps practices, and Azure AI frameworks. Strongly aspiring to leverage technical competencies, analytical thinking, and a passion for financial technology to drive innovation within corporate and retail banking graduate programmes.

Experience

Java Developer Trainee Programme | Mecer Inter-Ed Feb 2026 – Jul 2026

During my technical training, I developed strong algorithmic problem-solving techniques to design efficient and scalable solutions while cultivating core backend engineering skills in Java through OCA and OCP-aligned training frameworks. My practical database experience includes designing robust relational database schemas using PostgreSQL, with a specific focus on object-relational mapping via JPA and ensuring transactional integrity. I built and collaborated on system-based projects that simulate real-world applications using Git and GitHub for version control, while gaining valuable architecture exposure to Spring Boot, REST APIs, and MVC development. Additionally, I studied DevOps fundamentals by creating continuous integration and continuous deployment pipelines within cloud technologies like Azure DevOps, and I am actively expanding my technical breadth by studying cybersecurity principles aligned with CompTIA CySA+ alongside enterprise cloud intelligence centered on Microsoft Azure AI fundamentals.

Education

North-West University Feb 2020 - Dec 2023

BSc in Computer Sciences and Electronics

Core Curriculum: Computer Sciences, Electronics, and Mathematics.

Beverly Hills High School Jan 2014 - Nov 2018

National Senior Certificate (Matric)

Technical Skills & Certifications

Programming Languages	Java (Oracle Certified Practitioner), PostgreSQL, C#, SQLServer & Python
Frameworks & Libraries	Spring Boot, Maven, JDBC, .NET Framework & Angular
Cloud & DevOps	Microsoft Azure AI, DevOps Fundamentals (CI/CD Pipelines) & Infrastructure Management
Methodologies & Tools	Agile/Scrum Sprint Methodologies, Git Version Control & SDLC
Cybersecurity & Analytics	Threat Intelligence, Security Assessment Tools & DevSecOps

Professional Training (Mecer Inter-Ed)

- CompTIA Cybersecurity Analyst (CySA+) | Technical Course Completion, May 2026
- Microsoft Azure AI Fundamentals (AI-900T00) | Course Completion, May 2026
- PeopleCert DevOps Fundamentals | Certificate of Attendance, May 2026
- Java Enterprise Edition Training | In preparation for Oracle Certified Professional

Projects

Peoples Bank Web Application | Personal Fin-Tech Project [Live Dashboard](#) | [GitHub Repository](#)

- Engineered and deployed an interactive digital banking dashboard application using HTML5, CSS3, and the Bootstrap Framework to deliver a responsive, mobile-optimized experience.
- Built dynamic frontend state engines with JavaScript (ES6+) to simulate real-time account balances and live interest calculations.
- Designed the interface with clean visual component principles, improving financial data transparency and data processing workflows for the user.
- Structured data layouts to promote retail financial literacy, helping users understand core budgeting concepts.

Banking REST API | Personal Project [GitHub Repository](#)

- Developed a secure, high-performance RESTful API using ASP.NET Core and C# to handle core banking operations, allowing clients to seamlessly perform CRUD (Create, Read, Update, Delete) actions on their accounts.
- Integrated Microsoft SQL Server for data persistence using Entity Framework Core, designing relational schemas and transaction boundaries to ensure strict data consistency and auditing for financial records.
- Implemented clean architectural patterns, dependency injection, and secure endpoints to mimic enterprise banking software compliance standards.

Wealth Management Dashboard | Personal Project

- Currently engineering a responsive front-end application using Angular and TypeScript, integrating it with the backend API to transition the platform into a comprehensive wealth management system.
- Designing a unique Automated Micro-Investing & Round-Up Dashboard for the front-end, which tracks mock transactional expenses from the API and gives users the option to automatically "round up" their spare change to invest in simulated investment portfolios.
